
PAVAN KUMAR

B.Tech ECE Student • Java & Python • AI/ML Enthusiast

I am an Electronics & Communication Engineering student building a strong foundation in programming, artificial intelligence, machine learning and practical electronics. I enjoy learning by creating projects and improving my problem-solving skills.

CAREER FOCUS

Software Development Java • Python • Problem Solving	AI & Machine Learning Python • ML Concepts • Applied Projects
Electronics & Embedded Systems ECE fundamentals • Sensors • Microcontrollers	Continuous Learning Git/GitHub • Open Source • Technical Practice

ABOUT ME

Learning with a practical, project-focused approach

My academic background is in Electronics & Communication Engineering, where I am developing knowledge across electronics, communication systems and computing. Alongside my core engineering subjects, I am actively strengthening my programming skills in Java and Python.

I am especially interested in using software and AI/ML to solve practical engineering problems. I also explore Git and GitHub, open-source contribution workflows, databases and web technologies. My goal is to become a versatile engineer who can connect electronics knowledge with modern software solutions.

EDUCATION

B.Tech – Electronics & Communication Engineering
Koneru Lakshmaiah Education Foundation (KLEF / KLU)
Undergraduate Engineering Student

TECHNICAL SKILLS

Programming Java • Python • Basic JavaScript	AI / ML Machine Learning concepts • pandas • NumPy • scikit-learn
Web & Database HTML • CSS • Django • PostgreSQL • SQL	Tools Git • GitHub • VS Code • PyCharm • Jupyter / Colab
Electronics Embedded systems • Sensors • Microcontrollers • Basic PCB tools	Core ECE Digital communication • Signal processing • Networking fundamentals

CURRENT LEARNING

Java fundamentals and problem solving • Python for AI/ML • Git/GitHub and open-source workflows • Django web development • Practical electronics and embedded projects

PROJECTS

Selected academic and personal project work

01 Smart Grid Fault Detector

Technology: Python • Machine Learning • Power Distribution

A practical engineering concept focused on detecting and predicting faults in power distribution networks. The project explores the use of machine learning and a digital-twin style approach to identify abnormal behavior and support earlier fault prediction.

02 Noise Detection System

Technology: NodeMCU ESP8266 • Sound Sensor • OLED • RGB LED • Buzzer

An embedded project concept that detects environmental noise levels and provides immediate visual and audio feedback. It combines a sound sensor with a NodeMCU, OLED display, RGB LED and buzzer for a compact monitoring system.

03 Academic Research Collaboration Platform

Technology: Django • PostgreSQL • HTML/CSS

A web-platform concept for students and researchers to manage academic projects, share documents and communicate within a collaborative workspace. Designed around practical project-management and research collaboration needs.

04 Student / Employee Management Programs

Technology: Java • OOP • Scanner • Control Flow

A collection of Java practice applications covering student result processing, employee payroll, shopping bills, input handling, arrays, strings, methods and pattern programming. These projects strengthen programming fundamentals and problem-solving ability.

PROJECT APPROACH

I prefer projects that connect classroom concepts with real-world problems. My focus is on understanding the basics first, then building, testing and improving the solution step by step.

CERTIFICATIONS & EXPERIENCE

Training, applied learning and professional development

Applied AI & Machine Learning with Real-World Applications

Program: Summer Training cum Internship Program 2026

Organization: Sense Semiconductor & IT Solutions Pvt. Ltd.

Completed training modules, quizzes, assessment and a project focused on practical AI/ML learning.

Artificial Intelligence and Machine Learning Using Python

Program: Industrial Automation – L1 Certification Training

Organization: Koneru Lakshmaiah Education Foundation (Deemed to be University)

Completed technical training covering AI/ML concepts and Python-based learning.

PROFESSIONAL DEVELOPMENT

Git & GitHub

Learning repositories, branches, commits, push/pull workflows and pull requests.

Open Source

Exploring contribution workflows and beginner-friendly repositories.

Web Development

Learning Django, templates, static files and database-backed applications.

AI/ML Practice

Working with Python libraries and practical machine-learning exercises.

INTEREST AREAS

Artificial Intelligence • Machine Learning • Software Development • Embedded Systems • Electronics • Open Source • Problem Solving • Practical Engineering Projects

LET'S CONNECT

Open to learning, collaboration and opportunities

I am interested in opportunities where I can apply my engineering fundamentals, improve my programming skills, work on practical projects and learn from experienced teams.

Resume	[Add your resume link if available]

PERSONAL STATEMENT

“Learn the fundamentals. Build practical projects. Keep improving.”

My current goal is to grow from a strong engineering foundation into a well-rounded technology professional. I am continuously practicing programming, exploring AI/ML and building projects that help me understand how technology can solve real problems.
